CACHING,  
WEAPONS BURIAL  
CONTAINER

26 August 1959

Weapons Burial Container

Inside Dimensions: 4"x9"x50"

Empty Weight : Approx. 16 lbs.

Loaded Weight : Up to 60 lbs., depending on contents

Purpose : Long term caching of weapons

Material : 316 Stainless Steel

Description : The basic inside dimensions for this container were selected after packaging trials indicated that this size container would hold the greatest number of commonly cached weapons and still keep the gross weight under sixty pounds. This is the maximum weight that one man can be expected to carry for other than a short distance. The closure utilizes an O-ring for furnishing an hermetic seal. In static pressure testing it has safely withstood 3½ psi pressure differential, applied both externally and internally. Actual burial testing has been underway for only one month, therefore, the reliability of this container will not be positively known for at least a year.
